FULL-STACK DEVELOPER · ANDROID & WEB

Jonathan Cercenina Ramirez

Computer Science student at the University of Pangasinan – PHINMA, graduating in 2027 and **looking for an internship in software development**. I build web and Android software that holds up in real use, from an office billing system that runs without the internet to an offline tablet app now in use at a showroom.

9 projects,
5 built solo

349 automated tests in
my two newest apps

124 commits on my
thesis system

THESIS

Cable Manager

2026

Full-stack developer · billing and subscribers for a local cable and internet provider

PHP 8 MariaDB Apache JavaScript Kotlin Jetpack Compose PowerShell
Inno Setup Tailscale

- ◆ Delivered it three ways on **one database**: an office system, a subscriber portal that installs on a phone, and a native Android app with QR payment and PDF statements.
- ◆ Packaged the office system as **one Windows installer** that bundles Apache, MariaDB and PHP, so it runs on a computer with no internet and nothing else installed.
- ◆ Made backup restores **atomic**: a safety copy first, then every table refilled in one transaction, refusing wrong, truncated or newer files before touching anything.
- ◆ Secured it with bcrypt, prepared statements, CSRF tokens, **server-side access control for four roles**, and sign-in throttling with an audit trail.
- ◆ Wrote **11 automated test files** that run with one command and rebuild a throwaway database on every run.

PROJECTS

Solo: I built every part, as full-stack developer. Team: I was a programmer.

FergBentables

2026

SOLO Kotlin · Compose · Room

An offline Android tablet app in use at a showroom: buyers, multi-product orders, PDF receipts and Excel export, with 72 unit and 78 on-device tests.

ThesisFlow

2026

SOLO Kotlin · Compose · Firebase

An Android app for thesis groups: versioned drafts, adviser feedback, a task board and push reminders, with 138 unit and 59 security-rule tests.

Arts & Design Showcase

2026

SOLO PHP · MySQL

Artworks and artist profiles with search, messaging, and an admin area for both.

Auction Market

2026

SOLO PHP · MySQL · JavaScript

Live bidding that updates without a page reload, plus admin analytics.

St. Francis Court

2025

SOLO PHP · MySQL

Court booking, with admin views of usage, monthly bookings and revenue.

PUCU Event Calendar

2025

TEAM PHP · MySQL · JavaScript

A school event calendar with organisation dashboards and user management.

ITE 393 Campus App

2025

TEAM Kotlin · Firebase

A campus companion: profiles, a floor-by-floor building map, events and courses.

UCWD Leave Monitoring

2025

TEAM Kotlin · Firebase

Employees file leave from their phones; the office tracks and summarises it.
